

Can a hearing loop be used by someone without a hearing aid?

Yes, there are portable receivers available. They are not as convenient to use as a hearing aid with a built-in t-coil and are not fine-tuned to suit individual patterns of hearing, but can still be helpful to people with hearing loss who do not wish to wear hearing aids on a regular basis.

Where can hearing loops be used?

Hearing loops have almost infinite applications. They can be used in theaters, auditoriums, churches, class rooms, at ticket counters, drive-thru windows, banks, doctor's offices, pharmacies, and even with home TVs.

Where are the hearing loops installed already?

In the vicinity, there are over 25 hearing loops in Santa Barbara County, as well as the Ojai Playhouse, Temple Beth Torah and the Camarillo Church of Christ. For a comprehensive list visit our website.

Hearing loops are widely accepted across the UK and Scandinavia where you can find them in virtually every place where information is verbally communicated.

INDEPENDENT
LIVING RESOURCE
CENTER, INC.

Let's Loop Ventura is a project by the Independent Living Resource Center with funding provided by the California Communications Access Foundation and support from the following organizations:

Making Ventura one of the most hearing accessible counties in California.

= Equal Access for the Hearing Impaired

Approximately 20% (48 million) of American adults have some form of hearing loss in at least one ear, making it the most prevalent form of disability in the United States.

The goal of the Let's Loop Ventura campaign is to obtain equal access for individuals with hearing loss by promoting the usage of hearing loop technology.

What is a Hearing Loop?

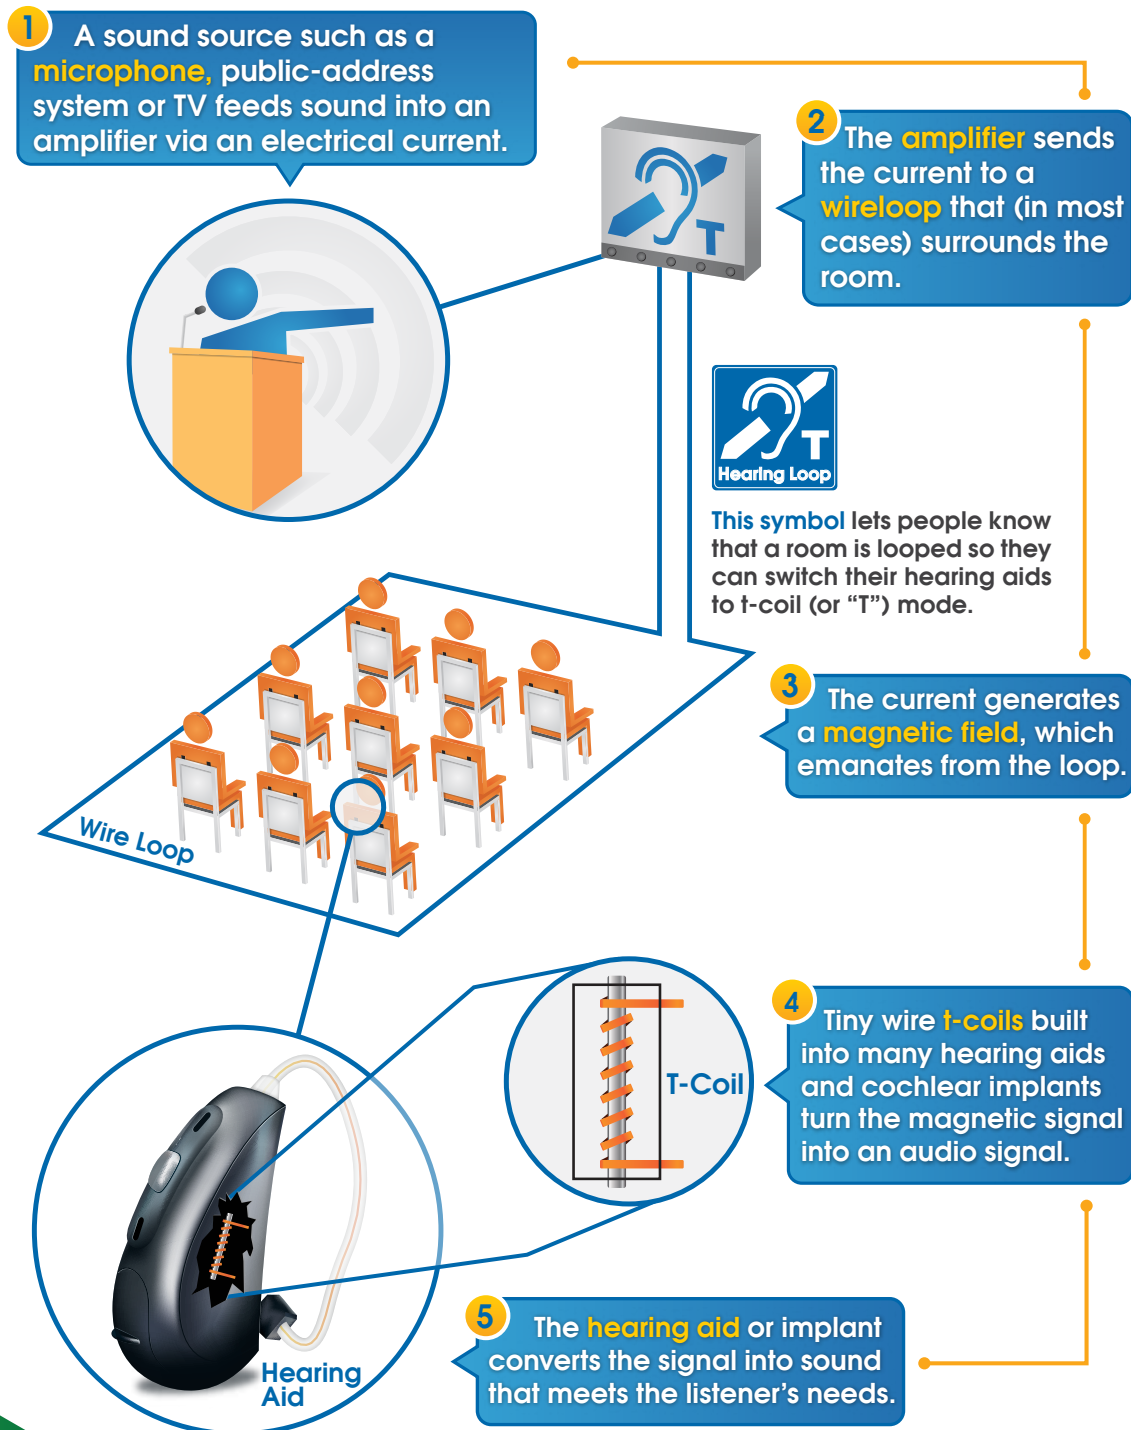

Hearing Loops are the only assistive listening system to send clear, pure sound directly to hearing aids. They are the international standard for universal hearing access.

Hearing Loop systems take sound straight from the source and deliver it right into the listener's hearing aid without extra noise or blurring. To them, it sounds like the speaker is right in their head. It turns their hearing aids into wireless earphones that broadcast sound customized for their hearing loss.

How do you use a Hearing Loop?

All the user needs to do is switch his or her hearing aid to the "T", telephone, or hearing loop program. All but the very smallest modern hearing aids tend to be supplied with an internal t-coil. However, it may not have been enabled when the device was initially programmed. If the user is not sure whether his or her hearing aid has a t-coil and/or does not know how to access the T program, his or her audiologist or hearing aid specialist will be able to advise.
